HEATCHOICE® PLENUM HEATER

The HeatChoice plenum heater was engineered to provide an economical and flexible way to add electric heat to a new or existing gas furnace. Homeowners can take advantage of electric utility dual fuel or time of use rates to give them a choice of which heating source is less expensive to operate. Utilize PV solar or other renewable credits with plenum heaters to further offset heating costs. This system also provides the homeowner peace of mind to automatically switch to the back-up heating supply upon failure of gas furnace or back to the gas system due to a system fault such as a high-limit. Electro's controls provide easy and safe operation.

FEATURES

- Safe and quiet operation with DC relays
- Standard HVAC wiring connections
- Built-in electrical safety breakers
- Heating selector switch
- Automatic switch to backup heat during control
- Stat Override Timer (SOT) automatically
- Single or two-speed AC compatibility
- Variable speed furnace blower control
- Utility off-peak control capability
- 20-year heating element warranty

HOW IT WORKS

A heating contractor chooses the model size that best meets the heating requirements of the home. We make installation a breeze with easy wiring connections to the furnace and air conditioner. Utilize a thermostat to adjust the comfort settings in the home for either heating and cooling. The homeowner simply selects the choice to use either electric or gas and let the plenum heater do the rest. It's your choice with HeatChoice!
